MINTERRORNEWS

Bringing the latest mint error news to the collector.

Mike Byers, Publisher & Editor Welcomes You!

Welcome to Mint Error News Magazine, bringing the latest mint error news and information to the collector. This is our third year bringing you both a print magazine and an on-line PDF magazine filled with articles, features and discoveries of major mint errors (striking errors) from the United States and around the World. Minterrornews.com has become one of the most popular and informative Internet resources for mint errors and is read by thousands of dealers and collectors.

Two major Mint Error News sponsors are Mike Byers and ANACS. Mike Byers is the Publisher and Editor of Mint Error News Magazine.

Mike Byers (mikebyers.com) has been a Professional Numismatist since 1978. He specializes in U.S. and World errors, and is now the largest dealer of the world's rarest mint errors. His new discoveries of major mint errors has been front page news for years. Mike Byers is also a Consultant for ANACS for Mint Errors.

Mike Byers is a life member of ANA since 1985, a charter member of NGC and a featured dealer/member of PCGS. He is also a founder member of the California Coin & Precious Metals Association and a life member of the Central States Numismatic Society.

ANACS is one of the three major grading services. They have been authenticating, certifying and encapsulating mint errors since 1991 which is years longer than the other two grading services combined. ANACS is highly respected in the Numismatic Community and has extensive experience in authenticating mint errors.

Two other sponsors to minterrornews.com are Tim Bullard (errorcointrader.com) and Allan Levy (alscoins.com). Because of their combined experience and insight of the error coin market, they will bring valuable news and information to minterrornews.com.

Additional sponsors are CoinLink, CoinFacts.com, errorworldclub.org, Eureka Trading, uspatterns.com, Northeast Numismatics, Robert L. Astrich and The Software Clinic. We encourage collectors and dealers to submit articles and photos of major mint errors that we may feature on the website.

Off-Center Errors

by Al Levy (alscoins.com)

Here are records of recent sales of off-center mint errors on eBay:

- 1. All coins were listed on eBay and closed from January 1, 2005 to March 31, 2005.
- 2. All lots had buyers. If the coins actually changed hands is unknown.
- 3. A picture accompanied each lot or it was not recognized.
- 4. Mislabelled items were ignored.
- 5. Some lots may have changed hands more than once.

- 6. "D" next to the date symbolizes that the coin had damage or was scratched.
- 7. "C" next to the date symbolizes that the coin was cleaned.
- 8. "B" next to the date symbolizes that the coin had damage and was cleaned.
- 9. If the date or mint mark was missing or partially visible, parentheses were used.
- 10. Postage/handling/insurance fees were ignored.
- 11. Major auctions were not listed.

Off-Metal Errors

by Al Levy (alscoins.com)

- 1. ALL LOTS HAD BUYERS. IF THE COINS ACTUALLY CHANGED HANDS IS UNKNOWN.
- 2. A PICTURE ACCOMPANIED EACH LOT OR IT WAS NOT RECOGNIZED.
- 3. BLURRY PICTURES OR OTHER PROBLEMS ARE NOTATED UNDER "OBSERVATION".
- 4. ITEMS MISLABELLED COMMANDED A SMALL PREMIUM.
- 5. SOME LOTS CHANGED HANDS MORE THAN ONCE.
- 6. ANY SCRATCHES, DENTS OR DEFECTS NOTATED WERE EITHER IN THE DESCRIPTION OR GRADING SERVICES' HOLDERS.
- 7. AUCTION HOUSES THAT LISTED THESE ERRORS WERE IGNORED.
- 8. SHIPPING CHARGES ARE NOT INCLUDED.

FROM 01/01/05 TO 03/31/05

Double Struck 1800 \$10 Eagle Featured in Upcoming Heritage Galleries Auction

Editor's Note: Below is the description from the Heritage Galleries listing:

1800 \$10 --Double Struck--AU58 PCGS. B. 1-A, Taraszka-23, Breen-6842, R.4. Only 5,999 pieces were struck of the 1800 ten dollar, making it a scarce date among early gold coins. Apparently the dies were retired after a die crack developed above LIBERTY on the upper obverse. That crack is especially noticeable on this piece, which would indicate that this was among the last coins struck in 1800. But what is most remarkable about this coin is not the date or even the grade, but the double striking seen on each side. This is not machine doubling that is commonly seen on early type coins. This piece was struck once, then the struck coin rotated almost 180 degrees and it was struck a

second time. Traces of the first strike are plentiful on each side, but the most obvious ones are portions of LIBERTY to the right of the stars and through stars 1-5, and on the reverse the UNU of UNUM is boldly impressed in the horizontal shield stripes.

This is the first coin we have seen like this. As all error collectors know, gold errors are of the highest order of rarity. Quality control was strictest with gold coins throughout the Mint's history, and it was certainly just as strict in the early days--perhaps even more so, as so much of the early republic's prestige was represented by these large coins when presented abroad. This is a very sharply struck example that shows crisp definition on the eagle's breast above the shield, and strong detailing on Liberty's hair and complete star radials. Almost complete mint luster remains on each side with semi-prooflike fields. The olive-gold color of the coin has been allowed to tone naturally and has taken on an attractive overlay of reddish patina on each side. A few field marks are noted, and there are several marks on Liberty's hair and cap, but frankly, it is difficult to determine just what is a post-striking defect and what is a result of the double striking. A very rare and obviously important coin for the early gold specialist.

Unique NGC Set of Paraguay Overstrikes

by Mike Byers (mikebyers.com)

This is a unique set of nineteenth century Paraguay patterns that were overstruck on previously struck gold, silver and copper coins. NGC recently certified this spectacular discovery set which is now being published for the first time for the numismatic community in this Mint Error News Magazine cover story.

Throughout history, some overstrikes were intentionally produced for several reasons. Sometimes overstrikes occur due to a coinage shortage. Another factor is the lack of available planchets to strike a new design.

In modern times, overstrikes are considered mint errors. Overstrikes are coins that have been struck over a struck coin. Generally speaking, there are two major types of overstrikes. The first type would be a double denomination (a Lincoln Cent struck over a struck Dime). Although these are overstrikes, they are referred to as double denominations and are known on many denominations of coins from many countries.

The second type of overstrike is a coin which is struck (either deliberately or as a mint error) on a previously struck coin from a different era and country. In ancient times, it was not uncommon to strike coins over previously struck coins with portraits of earlier Kings. In Colonial times, coins circulating were sometimes struck using other coins that

were in circulation, regardless of whether they were from the country striking the coin or from a different country.

An example of a rare overstrike is a 1915 Panama Half Commemorative which was struck in Proof over a cut down St. Gaudens \$20 gold piece. Another example is a rare overstrike from Mexico. It is a gold 8 Escudos struck over an earlier type and is listed in Krause as rare. The Panama Half and 8 Escudos were intentional overstrikes. There are also examples of unintentional overstrikes which are classified as mint errors.

The fascinating aspect of this unique set of Paraguay overstrikes is the fact that the dies used were unfinished pattern dies which had incomplete dates and that four of these patterns in this set were struck over struck gold coins. These gold coins were from Paraguay, Chile and Argentina and are on different denominations with different dates. Several of the gold coins that were overstruck are either rare dates or rare types and were in spectacular condition when they were hand selected. There is no doubt that this was a presentation set that was struck in the Mint and preserved to this day in mint state condition. This set is one of the most historic, dramatic and unusual numismatic rarities ever struck by an official Mint.

18XX Paraguay Peso Struck Over a Chile 1849 8 Escudos

The largest gold overstrike was a Pattern for the Paraguay Peso. The unfinished die only had the first two digits of the date. It was struck over an already struck Chile 1849 8 Escudos and is in magnificent condition. There is considerable detail of the 8 Escudos visible on both the obverse and reverse under the design for the Paraguay Peso. This is the most fascinating gold overstrike in this set due to its large size, condition of preservation, detail present from both designs and its status as being unique.

18XX Paraguay 50 Centavos Struck Over a Chile 1853 10 Pesos

The next gold overstrike was a Pattern for the Paraguay 50 Centavos. Once again the unfinished die only had the first two digits of the date. It was struck over an already struck Chile 1853 10 Pesos and is also in magnificent condition. There is considerable detail of the 10 Pesos visible on both the obverse and reverse under the design for the Paraguay 50 Centavos. Since the Chile 10 Pesos was larger than the Paraguay 50 Centavos, the original Chile 10 Pesos design is visible around the peripheral. This pattern overstruck in gold is also unique.

Page 15 minterrornews.com

18XX Paraguay 50 Centavos Struck Over a Chile 1859 10 Pesos

This gold overstrike was also for the Paraguay 50 Centavos Pattern. Using the same unfinished die as the gold overstrike described above, it was struck over an already struck Chile 1859 10 Pesos and is in gem condition. Since the size of the Chile 10 Pesos was very close to the diameter of the Paraguay 50 Centavos, some of the design of the understrike is visible on both sides. This pattern overstruck in gold is also unique.

18XX Paraguay 20 Centavos Struck Over an Argentina 1887 5 Pesos

The fourth gold overstrike was created when an Argentina 1887 5 Pesos was used instead of a blank planchet to strike this Paraguay 20 Centavos. Once again, the unfinished die was used to strike this coin. There is considerable detail of the Argentina 5 Pesos on both the obverse and reverse under the design of the Paraguay 20 Centavos. It is also in gem mint state condition. This pattern overstruck in gold is also unique.

Page 16 minterrornews.com

18XX Paraguay Peso Struck Over an Argentina 1882 Peso

The largest silver overstrike was a pattern for the Paraguay Peso. As with all of the gold overstrikes, the unfinished die only had the first two digits of the date. It was struck over an already struck Argentina 1882 Peso and is in choice mint state condition. There is considerable detail of the understrike visible on both sides. Even though it is not struck in gold, or over a struck gold coin, it is still a spectacular overstrike since it is on a large silver Peso from another country.

The remaining four overstrikes in this unique set also used the same unfinished Paraguay Pattern Dies and were overstruck on struck silver and copper coins from Argentina with various dates.

NORTHEAST NUMISMATICS INC. RARE COINS-PERSONAL SERVICE

Northeast Numismatics 10 Concord Crossing, Ste. 220 Concord, MA 01742 800-449-2646 www.northeastcoin.com Northeast Numismatics has an impressive inventory of over 1,200 U.S. and foreign coins. We have a strong selection of mint errors, both U.S. and foreign. And we carry every area of United States coinage from colonials through rare gold including type, commemoratives, silver dollars and much, in addition to our extensive inventory of world coins.

High quality "fresh" coins are what we are known for and take pleasure in offering. We constantly are hearing from our customers about our excellent prices and high customer service. 2003 is our 39th year of business, so order with complete confidence. Also, please keep in mind that we are always buying coins of all kinds, certified and uncertified, to fill our want lists.

1877 Seated Quarter Die Trial Adjustment Strike

This is a unique mint error and the only one known for any of the denominations in the Seated series (Half Dimes through Dollars). All die trials for US TYPE coins are extremely rare. This piece was in the collection of a well known East Coast coin dealer. This die trial shows the full date and part of the design on the obverse and reverse.

AD 582-602 Byzantine Gold Justin II Full Brockage

This is a 1400 year old Byzantine Gold coin that is a first strike reverse brockage of the obverse. It is almost in Mint State condition and shows incredible detail. Full brockages on ancient gold coins are extremely rare. The few that I have handled were overstruck by the dies in an attempt to correct the mint error and save the coin. This piece was not overstruck and shows the full brockage.

Lincoln Cent Struck on Bow-Tie Dime Scrap

Bow-tie errors are very scarce, but to have an off-metal bow-tie error is unbelievable! This Lincoln Cent was struck on a clad Dime bow-tie piece of scrap. The reverse is uniface. UNIQUE.

HARD COPIES ARE AVAILABLE TO OUR REGULAR CUSTOMERS

CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

conecaonline.org

1865 \$1 Indian Gold Proof Triple Struck Reverse

This is the only known proof \$1 Indian dated 1865, which has been recently certified by PCGS as triple struck reverse. Upon close examination there are actually five strikes on the reverse. There is detail from the original strike and also from the subsequent strikes as the coin slightly rotated in the collar.

Not only is this the only known multiple struck proof gold Dollar, it is also an rare dated Civil War mint error and is in gem proof condition.

Consign Your Coins to Mike Byers

Terms and Conditions

We are offering this service for error collectors and dealers alike. The reason why we are doing this is to promote the error business through the world wide web and to connect error collectors with the coins they have been searching for. In order to post your item on our web site: byersnc.com, you must agree to the following terms and conditions.

- 1. All major U.S. mint errors are accepted if they are certified by ANACS, PCGS, NGC or ICG.
- 2. The approximate value of each item must exceed \$1000.
- 3. The minimum time for any listing is thirty days.
- 4. Seller agrees to a seven day return privilege from date of receipt.
- 5. Seller agrees to use an escrow service if requested by the buyer.
- 6. We reserve the right to deny or cancel any listing at any time.
- 7. All listing are subject to prior sale.

Please do not offer us the following:

- 1. More than two coins bonded together.
- 2. Caps more than ½ inch high.
- 3. U.S. Errors that were obviously and intentionally struck as error coins. No impossible mint errors.

We only accept consignments of U.S. Errors that were legitimately found or released thru normal distribution channels

Scanning Specifications

- 1. Scan both the obverse and reverse of the entire holder.
- 2. Scan with a resolution of at least 300 dpi.
- 3. Save the picture in jpeg format (jpg).

Information Requirements

In addition to e-mailing a photo of your item, please include the following information:

- 1. Name, Address & Phone Number
- 2. E-Mail Address
- 3. Asking Price

After your item is listed, we will contact you by e-mail with any offers and questions. Once a price is agreed upon we will handle the entire sale for a 10% transaction fee, which includes all costs (eBay fees, grading fees, webmaster charges, postage and registration fees, insurance, paperwork, etc.).

If you have a Mint Error collection for sale or would like to sell your duplicates and do not want to consign your coin(s), we can purchase your entire collection outright. Please contact us at mike@mikebyers.com.

ANACS is the Collector's Choice because we know what counts: knowledge, integrity, and service. How much we value coin collecting is evident in our work.

The ANACS team enthusiastically works to advance coin collecting by offering unequaled expertise and developing new services.

This makes ANACS the choice of hobbyists, professional numismatists, and dealers. We are the coin grading service to contact when you want to know all the details about your coin's authenticity and grading.

Mint Error News Price Guide

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.

This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

Proof Errors

Proof coins are struck by technicians who hand feed the blanks int feed the blanks into special presses. They are produced, examined, and packaged using extreme quality control. It is very unusual to find major proof errors. A few broadstrikes, off-centers, double strikes in collars and off-metals have been known to be found in sealed proof sets. Proof errors are aggressively sought after by many error collectors.

A very small group of Proof errors recently came from a collection that was auctioned by the State of California. The U.S. Secret Service inspected and released this collection to the State of California determining that it was legal to own. The State of California then auctioned the collection and it has been dispersed since the sale.

Mint Error News Price Guide

Broadstrikes

A struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

Partial Collars

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

Uniface Strikes

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a 100% blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

Bonded Coins

Donded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

Coins Struck on Feeder Finger Tips

After a recent tour of the U.S. Mint at Philadelphia, it was discovered that the minting process had changed to some degree. One of the changes was that "feeder fingers" were used during the striking of all denominations of U.S. coins. Prior to this tour, U.S. coins that were struck on feeder finger tips were authenticated and described as being struck on aluminum scrap. Coins from all modern denominations have been discovered that were struck on the tips of these feeder fingers.

Struck Fragments

The blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an

obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

Transitional Errors

A transitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

U.S. Gold Errors

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the \$75,000 to \$100,000 range. Even a broadstruck U.S. Gold coin can easily sell for \$15,000 to \$30,000 compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under \$10. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to aquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

Denomination	Partial Collar	Broadstruck	Clipped Planchet	3% - 5% Off-Center	10% - 15% Off-Center

Indents

n indent error occurs when two blanks are Afed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Capped Dies

Asticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adheared struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

Die Adjustment Strikes

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

Double Denominations

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

Brockages

A brockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

Double & Multiple Strikes

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.

Off-Center Strikes

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

Off-Metals

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentaly fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

NUMISMATIC NEWS & RESOURCES

The CoinLink Numismatic Directory will launch with our 10th anniversary edition of CoinLink on January 1, 2005. However, we have started accepting FREE Submissions now.

If you have a web site and want to get listed - Add your Site Here!

New site features include an Articles Database, interactive Polls, a "What's New" section highlighting everything new in the marketplace, and an expanded news section.

We are committed to providing the latest information with unequaled access to numismatic resources to make your coin collecting more enjoyable. Thanks for being a part of CoinLink.

uspatterns.com

The Society of U.S. Pattern Collectors is dedicated to the study of many of the rarest coins struck at the U.S. Mint: patterns, die trials and experimental pieces.

Saul Teichman's Want List

Saul.Teichman@ey.com

I am looking for the following off-metal errors:

Wartime Nickel on a Copper Cent planchet. Bicentennial Half on a Cent planchet. Bicentennial Half on a Dime planchet. Kennedy Half on a Sacagawa Dollar planche

Kennedy Half on a Sacagawea Dollar planchet - if it exists.

Ike Dollar on a Cent planchet.

Ike Dollar on a Nickel 5 Cent planchet.

Ike Dollar on a Dime planchet.

Ike Dollar on a Quarter planchet.

Sacagawea Dollar on a Cent planchet.

Sacagawea Dollar on a Nickel planchet.

Sacagawea Dollar on a Dime planchet - if it exists.

A Partial Brockage, Double Struck, Partial Collar Bust Dime with UNITED STATES spelled UNIAMERIATES

by Henry Hilgard

This is a very unusual 1835 bust dime. The obverse shows an indentation (brockage) from an already-struck bust dime at the 7:30 clock position.

exactly where the letters TED ST of UNITED STATES ought to be, creating the composite word UNIAMERIATES.

On the reverse, directly behind this indentation, the letters AMERI from the reverse die are situated

And finally the edge ("third side") of the coin displays a partial collar in that there is a blank area of the edge toward the obverse side, with full normal edge reeding around the edge toward the reverse side. So how can we explain these unusual features?

First of all, it is clear that the coin has been struck twice. The first strike was well centered and created most of the detail of the coin. The second strike affected only the the indented region of the obverse and the unusual AMERI area of the reverse. The second strike occurred after this coin had rotated approximately 135 degrees but continued to sit on the reverse die. The second strike imparted the letters AMERI into the reverse of the coin where TED ST of UNITED STATES had been before. Evidence of both strikes can be seen together underneath the base of the A in AMERI from the second strike, where the the base of the T in UNITED from the first strike is still present.

During the second strike there were 2 coins in the coining chamber at once: this coin and a previously struck coin that overlapped the obverse of this coin at the indented area. We know that the overlapping coin was previously struck because it left an arc of reeding around the indented area as well as some signs of

lettering from its design. When the force of the second strike hit the 2 overlapping coins, the obverse of this coin became indented and the reverse was thrust onto the AMERI area of the reverse die.

The edge may provide a clue as to the sequence of events that gave rise to this piece. We know that this dime was struck twice and yet the edge has only a partial collar. That means that the collar functioned partially during one strike and did not function at all during the other.

Here's a possible scenario to account for how this coin came into existence. During the first strike the collar came up only part way and the ejection mechanism malfunctioned as well. That accounts for the partial collar on this coin and for the coin staying inside the coining chamber. A similar malfunction had affected the coin struck just before this coin, so that it too stayed in the coining chamber where it overlapped this coin and was then struck against it. During the second strike the collar could not come up around this coin at all because it had already been expanded to full inside-the-collar size by the first strike. Hence no reeding was imparted to the coin during the second strike.

It is exciting to contemplate a bust silver coin that possesses, as this one does, 3 different error features, one on each side of the coin (partial brockage on the obverse, double striking on the reverse, partial collar on the edge). Even more remarkable, these error features were simply left "as is" on this coin, whereas most other early error bust silver coins were put back into the screw press, probably by hand, and struck again to try to hide their error features. This one escaped that fate. I would love to hear of others like it if they're out there!

Canadian Mint Error

This is an incredible and unique Canadian mint error. 1978 Cent Dies were struck multiple times over an Olympic 1976 Commemorative \$10 that was dated 1974. Although many dramatic and unusual Canadian errors surfaced during the 1970's, this is the most dramatic and spectacular piece that I have ever seen.

1923-S Peace Dollar Die Trial Struck 5% Off-Center

This is a spectacular Peace Dollar major mint error. It was struck as a die trial adjustment strike. It was also out of the collar and is 5% off-center. There are only four known Peace Dollar die trials, also referred to as die adjustment strikes. All major Peace Dollar errors are extremely rare.

1891 \$5 Triple Struck Proof 64 NGC Mint Error Offered in Heritage Long Beach Signature Sale

From the Heritage Auction:

1891 \$5 -- Triple Struck--PR64 Ultra Cameo NGC. This is an amazing Proof half eagle that was triple struck with rotation between strikes on the reverse. The obverse does not show any evidence of the extra impressions from the die. The first and second impression of the design on the reverse are evident in a counterclockwise position relative to the third impression. In addition to the importance of this example from the extra strikes, it is also a rarity, one of just 53 examples coined in Proof format. Further, the 1891 half eagle is also a lower mintage issue in business strike, meaning that the overall rarity is an important factor when considering the demand of this issue. Different sources suggest disparaging survival rates for this issue. In his Complete Encyclopedia, Walter Breen suggested that about 25 to 30 different Proofs of this issue survive, representing about 60% of the recorded mintage. Including resubmissions, NGC and PCGS have combined to certify 45 examples. Perhaps this population total does fall in line with the Breen survival estimate. At Heritage, a check of our Auction Archives indicates that this is only the second time that we have offered a proof example of this date in all of our sales over the last dozen years. A complete and accurate roster of known examples has not been attempted, to the best of our knowledge, and would be difficult to accomplish. So many of the gold proofs are similar in appearance that plate matching over many years of auction offerings is rendered quite difficult. Of course, the description of this example with its tripled reverse would be unmistakable. We suspect that this particular example, with its extra design impressions, is most likely unique.

The surfaces have light yellow-gold color with mirrored fields and highly lustrous devices. A few light abrasions are visible on each side. There is a small black spot just above Liberty's eyebrow and a couple others on the obverse rim. These minor blemishes limit the grade and keep it from Gem quality. The devices are highly lustrous with frosty light yellow color. A few small lint marks attest to the proof status of this coin. One of these is located just below star 4. The most noticeable evidence of triple striking on the reverse is in the fields around the eagle, especially in the open areas above the eagle and below the motto. Certain of the letters in the motto and denomination are also tripled with this evidence weak but visible. The fields themselves have the wavy or watery appearance so often seen on proof gold coins. This is truly an amazing ultra cameo proof with exceptional eye appeal and a high degree of desirability.

"This is an impressive piece," said HNAI senior cataloger Mark Borckardt. "This amazing proof half eagle was triple struck with rotation between strikes on the reverse. The obverse, however, does not show any evidence of the extra impressions from the die. The first and second impression of the design on the reverse are evident in a counterclockwise position relative to the third impression."

Greg Rohan, HNAI president, added, "In addition to the importance of this example from the extra strikes, it is also a rarity. It's one of just 53 examples in proof format. Further, the 1891 half eagle is also a lower mintage issue in business strike, meaning that the overall rarity is an important factor when considering the demand of this issue."

He said that census records from both the Professional Coin Grading Service and the Numismatic Guaranty Corp. indicate that only 45 examples of the coin are known to exist.

"Indeed, Heritage has only offered two proof examples of this date in the last dozen years. We suspect that this particular example, with its extra design impressions, is most likely unique, and look forward to spirited bidding on this rare item."

Ike Dollar Struck on a Dime Planchet

It is estimated that there are only six to eight known Ike Dollars struck on clad Dime blanks. Even through this spectacular mint error does not show a date, it is very well centered and is in choice mint state condition.

Frequently Asked Questions

What are indents?

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

Frequently A sked Questions

What are mules?

A mule occurs when a coin is produced with mismatched dies. In some countries, the Mints use dies for different denominations with the same dimensions. In these instances, mules have been known to exist and are not that rare.

An example would be a New Zealand/Bahama mule where thousands were struck and they are worth \$50 each. The obverse of a Bahama 5 Cent piece was muled with the reverse of a New Zealand 2 Cent piece.

On the other end of the spectrum are the extremely rare mules including a few from the United States. An example would be a mule with a Sacagawea Dollar reverse and a State Quarter obverse.

The photo shown above is a rare example of a Euro 50 Cent reverse that was muled with a Euro 20 Cent reverse. This rare piece is also a "two-tailed" coin because both dies were reverse designs and both are denominations of Euro coinage.
