Welcome to Mint Error News Magazine, bringing the latest mint error news and information to the collector. This is our 15th year bringing you both an online PDF magazine and the Mint Error News website. There are over 1,200 articles, features, discoveries, news stories with mint error related info from the United States and around the World. Our website, minterrornews.com, has become the most popular and informative Internet resource for mint errors and is read by thousands of dealers and collectors.

Over the last 20 years with the advent of the internet millions of collectors have flocked to online auctions and dealer websites. Many people connect to various online forums and clubs to share knowledge and learn about Mint Errors. Everyone, including dealers, collectors and even investors have instant access to information as never before. The Mint Error market has experienced an explosion in collector interest over the last 20 years.

Time and again, rare and unique Mint Errors in the numismatic market have made headline news. Authentication and certification of Mint Errors is now commonplace. In 1991, ANACS was the first to authenticate, grade and encapsulate major Mint Errors. In 1999, PCGS and NGC began certifying Mint Errors. Major Mint Errors are now pursued, collected and traded just like patterns, territorial Gold, colonials and other interesting segments of numismatics.

In 1975, I purchased a 1900 Indian Head Cent struck on a $\$ 2$ 1/2 Indian Gold blank planchet for $\$ 7,750$ at a major coin auction. That price ranked among the top five ever realized for a Mint Error that few dealers or serious collectors would even consider. At that time price guides for Mint Errors were nonexistent and today that Indian Head Cent struck in Gold is certified MS65 by PCGS and is valued at six figures.

He is a member of NGC and was also a former grader and authenticator for PCGS.

Jeff Ylitalo has collected Mint Error coins since 1993. He has avidly researched \& written about this area of numismatics since 2006 contributing dozens of articles to CONECAs bi-monthly publication "ErrorScope" and Mike Byers "Mint Error News". Jeff is the former editor for the "ErrorScope" 2008-2017. Jeff's research and collecting focus is now primarily centered on World Error coins. Jeff can be reached via e-mail at: jylitalo@yahoo.com

# Unique Great Britain Proof 

 PatTEThis proof Half Sovereign off-metal mule pattern encompasses a combination of history, rarity and condition.

## Unigue Great Britain Proof Pattern Mule

This piece is the ONLY known certified example and the ONLY known piece as well. The obverse was struck from the regular obverse die intended for the Sixpence issue. The reverse was struck from an experimental reverse die, intended for the proof Half Sovereign issue.

The Royal Mint in London struck this mule with the reverse die exactly as it was designed in 1817, the first year of the appearance of St. George and the Dragon. This design of St. George and the Dragon is different than the design on the reverse of a 1880 Half Sovereign. The reverse design of a modified St. George and the Dragon appeared on Half

Sovereigns starting in 1871, but this mule has the design from 1817. Fascinating.

PCGS certified and authenticated this extremely rare proof off-metal mule pattern as Proof 64. As noted on the insert, it is listed in Krause PnA118 and also cf. WR-354 Var Silver. Wilson and Rasmussen (WR) wrote the English Pattern Trial and Proof Coins in Gold 1547-1968 in 2000. It is the reference book used for English gold. Although WR lists it as R7, one or two known, the only known gold example is in the Royal Mint Collection. This is the only known documented silver piece after 140 years and it is unique.

## Unique Great Britan Proof Pattern Mule

It has been preserved since it was struck and is totally original with dark and deep iridescent toning. During this time period the Royal Mint experimented with different engravers who produced a few fascinating and mysterious patterns, die trials, mules and off-metal strikes. This mule combines Wyon's depiction of Queen Victoria (the adopted design for the Sixpence obverse) with Pistrucci's iconic scene of St. George slaying the Dragon (reverse exactly as it was adopted and used in 1817).

Recently Heritage Auctions sold a 1875 proof Sovereign mule struck in silver and muled with a Shilling obverse
for $\$ 23,500$. It had a R-6 rarity rating meaning there are 3 or 4 known, with 2 certified.

Since this is the only known and only certified Half Sovereign mule from 1880, this is a once-in-a-lifetime opportunity to acquire an extremely rare proof Half Sovereign off-metal mule struck at the Royal Mint. This unique mule was struck during a time of experimental design, denominations, metals and die pairings. This mule belongs in the finest collection of Great Britain numismatic rarities or in a collection of unique and historical die trials, patterns and experimental coinage from Great Britain.

## Unigue Great Britain Proof Pattern Mule

# Unique Great Britain Proof Pattern Mule 

Reverse of 1871 Half Sovereign showing modified design of St. George and the Dragon, but not used on this mule.

## Unique Great Britain Proof Pattern Mule

Recently I sold a different Great Britain Gold Half Sovereign Mule. It also is one of two known and was muled with a 1829 obverse die with a 1823 reverse die.

## 1829/1823 Great Britain Half Sovereign <br> Proof Gold Mule

1 of 2 Known
PCGS PR 63 Cameo

## Unigue Great Britain Proof Pattern Mule

This Proof Gold Half Sovereign Mule was featured in my NLG Award winning book, World's Greatest Mint Errors on page 131:

## Great Britain, Dual-Dated 1829/1823 ½ Sovereign Mule PCGS Proof-63 Cameo

The obverse die is the type used to strike $1 / 2$ Sovereigns dated 1826-1828, and it is attributed as Fr-380. Interestingly, however, no regular-issue 1829 Half Sovereigns were struck either in proof or business strike formats. The reverse is a pattern die with a crowned shield in the center and the inscription ANNO 1823 around the border. A rose, shamrock and
 thistle are below the shield.

There are only two examples of this fascinating mule known to exist, and the other coin is impounded in the Royal Mint Collection. The piece pictured here, therefore, is the only one available for private ownership. No other gold mules are known regardless of denomination or country of origin. If this error were a product of the U.S. Mint, it would easily command a price of $\$ 500,000+$ in the numismatic market of the early 21st century.

# Great Britain Britannia Proof Gold Mule 

## by Mike Byers

There are only 3 known authenticated and certified obverse mules on the Britannia Proof Gold Coin Series from Great Britain. In 1987, the Royal Mint introduced the gold Britannia coins as bullion coins in mint state and in proof for collectors.

They were issued in $1 \mathrm{oz}, 1 / 2 \mathrm{oz}, 1 / 4$ oz, and $1 / 10$ oz sizes with face values in British Pounds of $100,50,25$ and 10. They are .917 fine gold ( 22 carat) and are legal tender in Great Britain. Raphael Maklouf was the sculptor who designed the royal portrait of Queen Elizabeth.

## Great Britain Britannia Prooi Gold Mule

There have been 5 different portraits used on Great Britain's coinage of Queen Elizabeth during her reign. The gold Britannias that were issued from 1987 through 1997 feature the 3rd portrait of Queen Elizabeth on the obverse, with the Britannia image on the reverse. The 4th portrait in 1998 to 2015 presented a more mature depiction of Queen Elizabeth.

This amazing mint error occurred when the obverse die of Queen Elizabeth's 3rd portrait (used to strike the gold Britannias from 1987 through 1997) was accidentally paired with the Britannia reverse die, instead of the correct and updated die depicting Queen Elizabeth's 4th portrait (used from 1998 to 2015). This created a mule consisting of wrong paired dies.

The 4th portrait was issued from 1998 to 2015, designed by Ian Rank-Broadley. Only 1,500 proof coins were issued in the $1 / 10 \mathrm{oz}$ denomination when ordered by collectors.

Gold mules are extremely rare and are among the most coveted types of mint errors. This is Great Britain's first modern gold mule coin. For reference, the U.S. has never struck a gold mule accidentally. There are only a few
modern (in the last century) gold mules that are known from any country on any denomination.

Ethiopia struck a gold mule in 1921 of a Werk denomination, with approximately 25 pieces known. Mexico accidentally created a gold mule pairing a 5 Centavos obverse die with a 1 Peso gold reverse die in 1898. The regular issue has a mintage of 5,193 and it is estimated that 20-30 mules were struck. The Royal Canadian Mint in Canada accidentally struck a few gold mules on the $2017 \$ 2,500$ coin, pairing it with the obverse die intended for the silver $\$ 250$ coin.

There are many mules known from many countries on different denominations. Some were struck with two obverse dies, two reverse dies, two wrong denominations, obverse dies from different years, reverse dies from different years and even from two different countries.

Coincidentally, The Royal Mint also accidentally struck two different mules, also in the Britannia series but on silver 2 Pound bullion coins for circulation. The first mule was struck with the obverse die that was intended for the 2014 one oz silver Lunar Horse bullion coin

## Great Britain Britannia Prooi Gold Mule

released in 2014. The estimated mintage of this silver mule is 17,000 coins. The second mule was struck with the obverse die intended for the 2014 one oz silver Britannia bullion coin released in 2014. The estimated mintage of this silver mule is 38,000 .

As unbelievable as it sounds, there are also 5 times in modern numismatic history where mules occurred not only with a pairing of two incorrect dies, but also struck off-metal on a wrong planchet. This type of mule and offmetal is extremely rare.

Here are the other times this type of mint error has occurred: a Chile 5 Pesos, a Chile 10 Pesos, a Great Britain

Halfpenny, a 10 Cent Euro and a Russia 50 Roubles. The Chile 5 Pesos was struck with two reverse dies on a NiBrass 1 Peso planchet and was certified by PCGS and is unique. The Chile 10 Pesos was struck with two obverse dies on a Bolivian 10 Cent planchet and was certified by PCGS and is unique. The Great Britain Halfpenny was struck with two obverse dies on a copper nickel planchet and was certified by NGC and is unique. The 10 Cent Euro was struck with two reverse dies on a nickel planchet and is one of three known. The Russia 50 Roubles was struck with two obverse dies on a bi-metallic planchet and was certified by PCGS and is one of three known.

> Here is the obverse design of Queen Elizabeth's 4th portrait that should have been used in 2002 when this coin was struck:

# Unique Ethiopia Double Struck Gold Mule 

## by Mike Byers

A11 gold mules are rare and this mule is unique for several reasons. It is a gold mule struck as a SPECIMEN strike and was authenticated and certified by PCGS SP 63. It was struck on a heavier gold planchet weighing 9.09 grams instead of the standard 7.0 grams. And it was DOUBLE STRUCK with doubling evident on both the obverse and reverse.

It was struck at the Addis Ababa Mint. The Emperor Haile Salassie presented these mules to very special dignitaries and VIPs. The few that are known today are either circulated or barely uncirculated.

It is muled with the obverse die for the silver $1 / 8$ Birr and the reverse die for the Menelik $1 / 32$ Birr. It is .900 gold and has a diameter of 21 mm . The obverse portrays the crowned bust of Emperor Haile Selassie, and the reverse depicts the crowned lion of Judah.

Somehow this unique Specimen strike survived. It was specially prepared as a Specimen strike and double struck on a heavier gold planchet. It is a rare combination of factors that makes this unique Specimen strike gold mule special and exciting.

## Consign Your Coins to mikebyers.com

Terms and Conditions

We are offering this service for error collectors and dealers alike. In order to post your item on our website you must agree to the following terms and conditions.

1. All coins must be from the United States, certified by PCGS or NGC, have a minimum value of $\$ 25,000$ each and should be either Gold Coins (Pre-World War 1), Patterns or Early Type Mint Errors (Pre-1950)
2. Each item must meet our inventory criteria in terms of desirability and market value.
3. Mike Byers Inc charges a $10 \%$ Commission on each sale.
4. The minimum time for any listing is thirty days.
5. Seller agrees to a seven day return privilege from date of receipt.
6. Seller agrees to use an escrow service if requested by the buyer.
7. We reserve the right to deny or cancel any listing at any time.
8. All listing are subject to prior sale.

## Scanning Specifications

1. Scan both the obverse and reverse of the entire holder
2. Scan with a resolution of at least 300 dpi.
3. Save the picture in jpeg format ( jpg ).

## Information Requirements

In addition to e-mailing a photo of your item, please include the following information:

1. Name, Address \& Phone Number
2. E-Mail Address
3. Asking Price

After your item is listed, we will contact you by e-mail with any offers and questions. Once a price is agreed upon we will handle the entire sale for a $10 \%$ transaction fee, which includes all costs (eBay fees, grading fees, webmaster charges, postage and registration fees, insurance, paperwork, etc.).

If you have a collection for sale or would like to sell your duplicates and do not want to consign your coin(s), we can purchase your entire collection outright. Please contact us at mike@mikebyers.com.

## A Summer Error Update

by Jon Sullivan

It's been some time since our last article (months in fact!), so we thought we would give some thoughts and updates of things happening in the coin market. The ANA is coming up in under two weeks, and we are excited to be there to see our customers and hopefully buy and sell some errors. This is a tie for "best error show of the year", with the winter FUN being the contender. Both are excellent shows, though, and we always look forward to them every year. If you are attending the show, stop by our table \#806. We will have a large selection of mint errors for sale, and will also be looking to buy anything you have for sale!

Overall the error market has been good. We have been able to offer a lot of fresh material over the last few months, but it has been going into collections pretty quickly. Of course, we try to price all our inventory at the current
market values, and so from time to time you will see certain errors go up or down in value, depending on where the market is at at any given time. We will be working hard throughout the rest of the Summer to continue to find as much fresh material as we can, and offer great values so keep an eye out for our "new inventory" email alerts (and if you're not signed up, we recommend you do so since the early bird gets the coin!)

Our most recent update of the website's inventory will be our last until after the ANA in a few weeks. If you don't see the errors you need on the website, send us an email and we will be happy to work with you to find the coins you are looking for. Until next time, have a great Summer everyone, and take time to enjoy your error collections!

# Rare Sacagawea Dollar Mule Is Among NGC AND PMG Collectibles in Long beach Auctions 

BY NGC

The rare and distinctive mint error combines the Sacagawea Dollar reverse and the Washington Quarter obverse.

This mule combines the obverse of a Washington Quarter, left, with the reverse of a Sacagawea $\$ 1$, right.

# Rare Sacagawea Dollar mule Is Among NGC AND PMG COLLECTIBLES IN LONG BEACH AUCTIONS 

US, world and ancient coins certified by Numismatic Guaranty Corporation ${ }^{\circledR}$ (NGC®) and banknotes certified by Paper Money Guaranty ${ }^{\circledR}$ (PMG®) are expected to attract significant interest from bidders at the Long Beach Expo of coins, currency and other collectibles.

One of the strangest and best-known US coins consigned to the auctions is a rare mint error certified by NGC.

It's an example a coin minted with a Washington Quarter obverse design on one side and the eagle design from the reverse of the Sacagawea Dollar on the other. It was struck on the manganese-based alloy planchet used for the Sacagawea Dollar.

The so-called "mule" of a 2000 Sacagawea Dollar and a Washington Quarter is graded NGC Mint Error MS 67 and is one of only 18 examples known.

# Unique Gireat Britainn Queen Elizabeth II Crown Trial Strike 

## by Mike Byers

This is a unique Crown die trial strike (1957) for preparing the coppernickel Crown for Queen Elizabeth II in 1960. It is 38.5 mm which is within tolerance for the 38.61 mm Crown size struck in 1960.

It was either struck with two obverse or two reverse dies
since it was a trial strike. PCGS authenticated and certified it MS 62.

Although there are many smaller trial strikes (1957) testing new metals, designs and compositions, this is a unique Crown size die trial in copper-nickel and has an identical obverse and reverse.

New From Krause Publications:

## Strike It Rich With Pocket Change Error Coins Bring Big Money

by Brian Allen \& Ken Potter NEW 4th Edition

It takes a keen eye to spot them - and a little know-how - but errors on coins produced by the U.S. Mint occur every year. And these errors can be worth a fortune to coin collectors. Strike It Rich with Pocket Change shows the reader how to detect errors, what to look for and how to cash in on them. This book has a strong appeal for someone with a mild to dedicated
interest in coins, while drawing upon the treasure hunter in all of us

- anyone who is looking for a hobby that does not require a great up-front investment, yet offers the potential of discovering valuable rarities. Any collector who has completed the standard set of a type or series now has an opportunity to broaden the scope of that collection.

# Belgium Silver 50 Centimes Mule 

## by Marc Crane

TThis is a Belgium 50 Centimes struck during the reign of Leopold II. The reverse die is dated 1899 but was incorrectly muled with an obverse die dated 1907. Obviously this was an intentional muling to create a rarity and

fantasy piece. In 1907, the mint used a die for the reverse dated 1899. This is not a restrike since the reverse die dated 1899 is not cancelled, corroded or rusted, but is as fresh as the obverse die from 1907.

## Belgíum Silver 50 Centimes Mule

# PCGS CoinFacts 

## Your Online Reference for U.S. Coins

Welcome to PCGS CoinFacts. Our site includes comprehensive information on nearly 30,000 U.S. coins. It offers everything from basic, startup information for new collectors, to a wealth of detailed information the seasoned collector, buyer or seller can't afford to be without.

From the PCGS CoinFacts Home Page, you can access all denominations and major types of U.S. coins. The link will take you to a Series Page, which offers images of the finest PCGS-graded coin in the series, and a nice explanation including the history and why the coins in the series are important.

The real "business end" of PCGS CoinFacts begins with the individual coin pages, which are loaded with photos and information. To view the essential features of PCGS CoinFacts, you can click on them one at a time, or go straight to a particular feature of interest.

# Lincoln Cent Double Denomination Mint Error 

by Christopher Talbot Frank, CTF Error Coins

Irecently purchased three examples of Lincoln Cents that are double denominations. All three are dated 1965 and were struck at the San Francisco Mint. It is the first year that dimes were struck in
the clad composition and this is in demand in the 11-cent series. Struck 1965 dimes were overstruck by the 1965 cent dies creating a very dramatic and visual mint error.

## Lincoln Cent Double Denomination Mint Error

## WORLD PAPER MONEY ERRORS

World Paper Money Errors Explored!

Odd shapes, upside down prints, intriguing cuts and folds, and missing design elements are only a few of the different printing errors examined in this expansive collection on foreign error notes. World Paper Money Errors is a visually compelling avenue into the fascinating and rarely explored area of numismatics that expands on the hobby of collecting paper currency.

Author Morland Fischer's comprehensive collection reflects the attraction and advantages of exploring foreign printing errors. An overview of collecting paper money errors in today's numismatic market offers insights on the great disparity between domestic and world notes. Market values are discussed, acknowledging what variables make an error note precious in the trade. Incorporating these concepts and more, Fischer expands the method of collecting currency errors by introducing a Foreign Error Note (FEN) scale to gauge price levels based on error type.

With over 200 examples of dramatic, colorful and intriguing foreign paper money errors, collectors and spectators alike are exposed to a new form of collecting currency. The numismatic community will benefit from this thorough guide that is unlike any other on the market.

# Unique Indian Head Cent Multi-Struck Ofif-Center on Silver Dime Blank 

This unique and spectacular mint error was intentionally struck at the U.S. Mint in Philadelphia in 1900. The identical dies that struck this SILVER Indian Cent also struck 3 Indian Cents IN GOLD on \$2 1/2

planchets. It was struck multiple times $20 \%$ off-center on a silver dime planchet and is in gem mint state condition, authenticated and certified by NGC as MS 66.

For reference, here is one of the 3 Gold Indian Cents that was featured in a Mint Error News Magazine Special Edition:

## COIN

## The CoinWeek Mission:

Our mission is a simple one, to inform, entertain and educate our readers about coins, paper money, and every other area of numismatic pursuit.

We accomplish that mission by having the best numismatic writers and contributors in the industry. In fact since 2011, CoinWeek writers and contributors have won over 40 Numismatic Literary Guild Awards and CoinWeek itself has been named the "Best Online News Site" for the last 4 years straight.

CoinWeek provides the facts that collectors can use. We tell the back stories about coins and the people that collect and sell them. We provide perspective commentary and analysis on the issues that effect the industry and the hobby we love.... And we do it all for FREE.

## Why You Should Read CoinWeek:

- CoinWeek is independent and unafraid of tackling important issues that face the hobby.
- CoinWeek and its representatives attend almost all of the major Coin \& Currency conventions in order to bring the most current print and video news from the numismatic marketplace to our readers.
- CoinWeek offers innovative coverage of modern coin issues, auction houses, and the world mints. We go beyond the surface information you usually find elsewhere.
- CoinWeek maintains the largest numismatic video library accessible on the web to offer our subscribers the most comprehensive educational video available with information about rare coin and currency news, seminars, interviews, collecting tips and more.

## Finest Known Oif-Metal Shield Nickel on Cent Planchet

This Shield Nickel was struck on a bronze planchet that the U.S. Mint intended to use for the production of Indian Cents. It is an extremely rare off-metal with 5 known examples.

It is the finest known, authenticated and certified by NGC as Gem Mint State 65 Brown. It is the plate coin in chapter 29 of the NLG Award winning book, World's Greatest Mint Errors.

## Finest Known Oif-Metal Shield Nickel on Cent Planchet

## Finest Known Oif-Metal Shield Nickel on Cent Planchet

## Finest Known Oif-Metal Shield Nickel on Cent Planchet

This is the plate coin in chapter 29 of the NLG Award winning book, World's Greatest Mint Errors.

## 12.

## 1882 Shield Nickel

Struck on a Cent Planchet-NGC MS-65 Brown
A wrong planchet error from the second-to-last year of the Shield Nickel series, this 1882 is struck on a bronze planchet that the Mint intended to use in the production of Indian Cents. A few periph eral devices are slightly off the planchet, but the definition is otherwise sharp.

The Shield Nickel series of 1866 -1883 has yielded very few major mint errors, a fact that confirms the significance of this fully original Gem.

Rarity: 5 Known
Value: 540,000

## CONECA

The Combined Organizations of Numismatic Error Collectors of America

CONECA is a national numismatic organization devoted to the education of error and variety coin collectors. CONECA focuses on many error and variety specialties, including doubled dies, Repunched mintmarks, multiple errors, clips, double strikes, off-metals and off-centers -- just to name a few. It publishes an educational magazine, The Errorscope, which is printed and mailed to members bimonthly. CONECA offers a lending library, examination, listing and attribution services; it holds annual meetings at major conventions (referred to as Errorama) around the country, and offers auction services to its members. Please visit conecaonline.org and enjoy!

## CONECA Variety Attribution Services

CONECA offers two attribution services. One service enables members and non-members to send their coins directly to an authorized CONECA attributer. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins attributed by a CONECA attributer and then graded and slabbed by ICG.

## CONECA Error Examination Services

CONECA offers two examination services. One service enables members and non-members to send coins to an authorized CONECA examiner who will return an opinion of each coin's error classification. The other service is offered through the numismatic grading firm of ICG and enables CONECA members and non-members to have their coins examined by a CONECA examiner and then graded and slabbed by ICG.

## Mint Error News Price Guide

## - Updated November 2019 -

This price guide is brought to you by Mint Error News. It has been compiled by many of the top major mint error dealers.
This price guide is a guide. Prices fluctuate due to the date, grade, eye appeal and how dramatic the striking error is. Rarity is also a factor. The price is sometimes based on the rarity and grade of the type of coin as well as how rare the error is. The price can also vary depending on whether two collectors are bidding for the same rare major mint error. When purchasing a mint error, it is important to use multiple resources to determine value, as there are many mint errors that do not fit into one category.

## Mint Error News Price Guide

## Broadstrikes (Updated November 2019)

Abroadstruck error occurs when a coin is struck without the collar to form the rim and edge that is part of the shape of the coin. Coins can be broadstruck on either type one or type two planchets. When a coin is broadstruck the blank being fed into the collar will spread and distort outward as it is being struck because the collar isn't in the correct position to retain it.

## Mint Error News Price Guide

Partial collar strikes occur when there is a malfunction of the striking press. This causes the collar to be in an incorrect position. The lower die (usually the reverse die) is recessed in the collar. This allows the coin which is going to be struck to have a formed rim. After a coin is struck the lower die raises upwards, pushing the struck coin out of the collar and ejecting it. If a blank entering the collar is not properly seated, it will only have partial reeding as it is struck. The edge of this coin will have a partial reeding and a partial blank surface area. Recently, the Mint has installed new machinery where either die can be installed in either position.

## Mint Error News Price Guide

## Uniface Strikes (Updated November 2019)

Uniface coins occur when there have been two blank planchets in the press at the same time. The other blank will obstruct the die on either the obverse or reverse side, which will prevent it from having that design on the coin. There are many different variations involving uniface errors. In addition to having a $100 \%$ blank obverse or reverse, a coin can be struck off-center, with a blank planchet in the collar which will obstruct one side of the off-center. There are also mated pairs which have a combination of multiple errors which can include a side which is uniface. Finally, there are uniface strikes due to a die cap which adhered to the die, forming itself in the shape of a die and striking blank planchets.

| Denomination | Uniface Obverse XF | Uniface Obverse Unc | Uniface Reverse XF | Uniface Reverse Unc |
| :---: | :---: | :---: | :---: | :---: |

## Bonded Coins <br> (Updated November 2019)

Bonded coins occur when the feeder system, which supplies blank planchets to the coin press, malfunctions and jams. When this occurs, a struck coin is not properly ejected and another planchet is fed into the collar and is struck. This struck coin will land on top of the previously unejected strike. These coins will then crush and bond together. This may occur many times as more coins bond.

| Denomination | 2 Planchets | 3-4 Planchets | 5-10 Planchets |
| :--- | :---: | :---: | :---: |
| Lincoln Cent Wheat Ears | $\$ 5,000$ | $\$ 15,000$ | - |

## Struck Fragments <br> (Updated November 2019)

TThe blanking press takes the coils of metal strips and punches blanks out of it, ejecting the webbing at the other end. The webbing is cut into small scrap pieces to be melted and recycled. Occasionally a scrap piece will be mixed with the blank planchets and struck by the dies. Struck fragments are rare in the larger denominations. These can be uniface or die struck both sides and are very rare on type coins.

| Denomination | Uniface | Die Struck Both Sides |
| :--- | :---: | :---: |
| Indian Cent | $\$ 1,000$ | $\$ 2,000$ |
| Lincoln Cent Wheat Ears | $\$ 750$ | $\$ 2,000$ |
| Lincoln Cent Memorial | $\$ 75$ | $\$ 125$ |
| 3 Cent Nickel | $\$ 3,000$ | $\$ 3,500$ |
| Jefferson Nickel | $\$ 100$ | $\$ 200$ |
| Roosevelt Dime Silver | $\$ 500$ | $\$ 1,000$ |

## Mated Pairs (Updated November 2019)

Mated pairs involve two individual coins with different errors that were struck together at the same time. Mated pair error combinations can be found in most error types and come in many shapes and sizes. Mated pairs can be overlapped when one of the coins is struck off-center on top of another coin. Another type involves a brockage where a struck coin was perfectly centered on a blank and restruck. Some mated pairs involve a die cap where the cap and brockage coin are discovered together, but this is a scarce find.

The rarest mated pair type involves two die caps (obverse and reverse) where both dies were capped at the same time and both die caps are mated. This last type is extremely rare and there are only a few known examples of mated pairs involving an obverse die cap and reverse die cap. There are several of these mated pairs known on Kennedy Halves including two dated 1976, which is the Bicentennial year. One of the most spectacular mated pairs involve two Barber Dimes, an obverse die cap mated to a reverse die cap and are unique.

Mated pairs can also involve an off-metal where a smaller blank planchet or smaller struck coin was struck on top of a larger coin. This type is extremely rare. The most spectacular pair known is a double struck Franklin Half which was mated to a Lincoln Cent. The Lincoln Cent blank was on top of the obverse of the struck Franklin Half. This pair was then struck together. It is unique.

| Denomination | Overlapping | Full Brockage | Die Cap | 2 Die Caps |

# Mint Error News Price Guide 

## Transitional Errors (Updated November 2019)

Atransitional error occurs when a coin is struck on a planchet from a previous year with different metal composition. The most famous transitional is a 1943 copper cent struck on a 1942 copper blank. 1943 cents were struck in steel because of the copper shortage during World War II. Other famous transitionals include 1965 coinage struck in silver instead of clad.

There are also transitionals struck on blanks for the next year. An example is 1964 coinage in clad instead of silver. Most recently, transitionals were discovered involving the SBA and Sacagawea Dollars of 1999 and 2000. There are eight known 1999 SBA Dollars struck on the brass planchet for the 2000 Sacagawea Dollar, and four known 2000 Sacagawea Dollars struck on a clad planchet for the 1999 SBA Dollar.

| Denomination | Off-Metal Planchet | Circulated | AU | Unc | Choice Unc - Gem |

## U.S. Gold Errors (Updated November 2019)

Major mint errors on U.S. Gold coins are the most prized category of all mint errors. Gold errors are very rare and a few have traded in the $\$ 75,000$ to $\$ 100,000$ range. Even a broadstruck U.S. Gold coin can easily sell for $\$ 15,000$ to $\$ 30,000$ compared to a broadstruck Cent, Nickel, Dime or Quarter which all sell for well under $\$ 10$. Many serious collectors of Gold Errors have to wait patiently for months and sometimes even years to acquire that one special piece for their collection.

The prices listed here are for common dates in AU-Unc. Better dates and errors that are in gem condition are worth considerably more.

| Denomination | Partial Collar | Broadstruck | Clipped Planchet | 3\%-5\% Off-Center | 10\% - 15\% Off-Center |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Indents (Updated November 2019)

#### Abstract

An indent error occurs when two blanks are fed inadvertently into the same collar, with one blank partly overlaying on top of the other. When the hammer die strikes this combination, the upper blank will be forced into the lower blank, creating a depression which is shaped similar to the upper blank. A scarce type of indent occurs when a blank intended for one denomination lands on top of a blank from a different denomination.

| Denomination | 10\%-25\% XF | 30\% - 50\% XF | 10\% - 25\% Unc | 30\% - 50\% Unc |

## Die Caps (Updated November 2019)

Die caps are caused when a struck coin sticks to the upper hammer die. Once the coin is struck to the die face, the reverse of the struck coin becomes the new die face. When the next blank is fed into the collar and the strike occurs, the reverse design of the adhered struck coin impresses itself into the new blank. This struck coin is a brockage strike. The coin that adhered to the upper die is known as a die cap. This process repeats itself as more coins are struck by the cap. The greater the number of strikes, the higher the cap metal will be pushed around the upper die shaft. Eventually, the cap brakes away from the die in the shape of a thimble.

## Die Adjustment Strikes (Updated November 2019)

Die adjustment strikes are also known as die trials. This error occurs when a coin is struck from the press with very little pressure. When the press is being set up and adjusted, extremely weak strikes occur as the strike pressure reaches its optimum level. These die trials are destroyed after being struck and are rarely found in circulation.

## Double Denominations (Updated November 2019)

One of the most expensive, popular, and desired types of errors are the double denominations. This error happens when a coin is struck on a previously struck coin of a smaller denomination. Examples are a cent on a struck dime, and a nickel on a struck cent. The most dramatic are those with considerable design visible from the original strike. There are a few known double denominations with different dates.

| Denomination | Struck On | Circulated | AU | Unc |
| :--- | :--- | :---: | :---: | :---: |

## Mint Error News Price Guide

## Brockages (Updated November 2019)

Abrockage error can only occur when there are two coins involved. One of the coins involved will always be a struck coin which has not ejected properly. That struck coin will find its way back between the dies and will be struck next to a blank planchet which was fed into the collar. The image of that first struck coin will be impressed into that side of the blank planchet. The result will be a second coin which has images of the first coin impressed into it. Those images will be pressed into the coin and the image will be in reverse. This incuse sunken image is known as a brockage.

| Denomination | 50\% Brockage XF | 100\% Brockage XF | 50\% Brockage Unc | 100\% Brockage Unc |

## Mint Error News Price Guide

## Double \& Multiple Strikes (Updated November 2019)

When a blank planchet is struck by the dies, the normal procedure is for the feeders to eject the struck coin out of the collar and into a chute. If there is a malfunction and the struck coin isn't ejected, it may receive a second or third strike by the dies. A multiple struck coin can happen in many ways and have many combinations of errors.
(Since each double and multiple strike can vary from being $10 \%$ offcenter to $90 \%$ off-center, the prices listed below can be substantially more based on the percent off-center and dramatic overall look.)

| Denomination | XF/AU | Unc |

## Off-Center Strikes (Updated November 2019)

Off-center coins are one of the most common and best known types of errors. This happens when a blank which is supposed to be fed into the press, lands in the collar improperly. When this occurs only part of the blank is between the upper and lower dies. When the dies strike the blank, only that part will be struck with a design.

## Off-Metals <br> (Updated November 2019)

Off-metal and wrong planchet errors occur when a correctly made blank from one denomination is accidentally fed into a press for another denomination. Examples are a nickel struck on a cent planchet and a cent struck on a dime planchet. The coin struck on an incorrect blank will weigh exactly what the denomination of that blank would have been. An even more dramatic wrong planchet error is a coin struck on a previously struck coin of a different metal.

| Denomination | Off-Metal Planchet | Circulated | $\mathbf{A U}$ | Unc | Choice Unc $-\mathbf{G e m}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Counterbrockages <br> (Updated November 2019)

Acounterbrockage error involves a cap die and a previously struck coin. When a cap die strikes a previously struck coin, the obverse design from that struck coin will be impressed into the cap. The result will be a design where the cap face will be an incuse brockage. When a new blank is struck by this cap die with an incuse brockage image, the obverse will have a raised and spread image from that incuse design of the cap. This brockage impression is known as a counterbrockage.

## Fold-Over Strikes (Updated November 2019)

Afold-over coin is one of the most dramatic types of errors. It occurs when the blank is standing vertically between the dies. During the strike, the force is so great that it bends and folds the blank. These fold-overs can be on-center or off-center, and come in many different shapes. There are a few fold-overs with multiple errors, either with an additional strike or fold-over. Denominations above quarters are very scarce.

# Martha Washington Test Pieces (Updated November 2019) 

TThere is one set of a Dime, Quarter and Half struck by Martha Washington dies that are permanently housed in the Smithsonian Institute, embedded in blocks of lucite. According to United States Pattern and Related Issues, by Andrew W. Pollock III, "the only trial pieces purported to have survived metallurgical testing in 1965 were the Dime, Quarter Dollar, and Half Dollar equivalent strikes in copper-nickel clad over copper."

Mike Byers' discovery of the Martha Washington Test Piece on a copper-zinc Cent planchet struck $10 \%$ off-center with a uniface reverse was a front page Coin World article on August 7th, 2000.

| Denomination | Unc | Choice | Gem |
| :--- | :---: | :---: | :---: |
| Martha Cent | $\$ 4,000$ | $\$ 5,000$ | $\$ 6,000$ |
| Martha Nickel | $\$ 4,500$ | $\$ 6,000$ | $\$ 7,500$ |
| Martha Dime | $\$ 7,500$ | $\$ 10,000$ | $\$ 12,500$ |
| Martha Quarter | $\$ 5,000$ | $\$ 7,500$ | $\$ 10,000$ |
| Martha Half Dollar | $\$ 5,000$ | $\$ 7,500$ | $\$ 10,000$ |
| Martha Dollar (SBA Planchet) | $\$ 10,000$ | $\$ 12,500$ | $\$ 15,000$ |
| Martha Dollar (Sac Planchet) | $\$ 6,000$ | $\$ 7,500$ | $\$ 10,000$ |

## New Edition of Bart's United States Paper Money Errors Available Now

Comprehensive Catalog and Price Guide makes first appearance since 2008

By Coin \& Currency Institute....
After a lapse of seven years, a new edition of United States Paper Money Errors, Fred Bart's ground-breaking book is now available. The fourth edition is more than just an update to the third: Bureau of Engraving and Printing (BEP) errors have been added, nearly all the illustrations have been changed, there is a rarity guide for each note-which additionally are now priced in four grades (EF, AU, Choice CU and Gem CU)-and, for the first time, there is a section showing some notes in color.

This has always been an enormously popular book, not only among established collectors but also with newcomers seeking to learn more about their "find." There is no other book like it on the market. More than a price guide, its 296 pages contain a wealth of information on what to look for and what mistakes to avoid. It is a necessity for all dealers, collectors, and anyone who comes into regular contact with paper money.

- The new and improved must-have book for U.S. paper money errors
- Rarity guide for each note
- Prices in four conditions
- The universally-used Friedberg Numbering System ${ }^{\text {TM }}-$ The standard method for describing U.S. currency
- Invaluable appendices with data found nowhere else
- Hundreds of photos
- 296 pages, $20+$ with new info
- Convenient \& handy 5.75 x inch format

## Len Roosmalen

A mule occurs when a coin is produced with mismatched dies. In some countries, the Mints use dies for different denominations with the same dimensions. In these instances, mules have been known to exist and are not that rare.

An example would be a New Zealand/Bahama mule where thousands were struck and they are worth $\$ 50$ each. The obverse of a Bahama 5 Cent piece was muled with the reverse of a New Zealand 2 Cent piece.

On the other end of the spectrum are the extremely rare mules including a few from the United States. An example would be a mule with a Sacagawea Dollar reverse and a State Quarter obverse.

The photo shown above is a rare example of a Euro 50 Cent reverse that was muled with a Euro 20 Cent reverse. This rare piece is also a "two-tailed" coin because both dies were reverse designs and both are denominations of Euro coinage.
